The diagram shows a rectangular tank with a width of 10 meters and a height of 5 meters. The bottom left corner is labeled 'NOVA ÁREA DE COLETA' (New Collection Area) and 'ÁREA DE DRENAGEM' (Drainage Area). A vertical pipe labeled 'PVC 100MM' is connected to the bottom right corner. Two horizontal pipes, both labeled 'PVC 100MM', enter from the top corners. The left pipe is labeled 'ENTRADA DE ÁGUA' (Water Input) and 'SISTEMA DE ABASTECIMENTO' (Water Supply System). The right pipe is labeled 'SISTEMA DE DRENAGEM' (Drainage System). A small arrow at the bottom indicates a slope of 1:10.

The diagram illustrates a longitudinal section of an acanthocystis embryo. At the top, a large, rounded cell labeled 'PROTOBLAST' contains numerous small, dark, granular structures. Below this, a layer of cells labeled 'ENDOTHELIUM' is shown. The central part of the diagram shows a large, elongated cell labeled 'MESOBLAST'. Within the mesoblast, a distinct, elongated structure labeled 'MESOBLASTIC CILIUM' is visible. The bottom of the diagram shows a layer of cells labeled 'EXOCERIUM'.

The diagram illustrates a longitudinal section of a plant root system. It shows a central vertical axis representing the root, surrounded by concentric layers of tissue. Labels indicate the following layers from the center outwards:

- Root hair zone:** The outermost layer of the root.
- Zone of elongation:** The layer immediately beneath the root hair zone.
- Zone of differentiation:** The layer beneath the zone of elongation.
- Vascular cylinder:** The central region containing the vascular tissue.
- Endodermis:** A layer of cells lining the vascular cylinder.
- Pericycle:** Cells located between the endodermis and the vascular cylinder.
- Cambium:** A layer of cells located between the pericycle and the vascular cylinder.
- Xylem:** The vascular tissue on the outer side of the cambium.
- Phloem:** The vascular tissue on the inner side of the cambium.
